

# CABRAMATTA LOOP PROJECT FACT SHEET

## TREE RESTORATION AND LANDSCAPING PLANS

The Cabramatta Loop Project will make a sustainable contribution to the community by allowing more freight to be transported by rail. This will help reduce the number of trucks on our roads and associated traffic congestion.

In the short term, trees will be removed to make way for the widened railway corridor and proposed Broomfield Street changes.

When construction is complete, new vegetation and trees will be planted to enhance the surrounding areas on Broomfield Street and Jacquie Osmond Reserve.

The selection of vegetation and tree species will consider the surrounding environment, blending in the overall character of the area, in consultation with local councils.

We will replace all of the trees that are removed for construction works.

### Proposed Broomfield Street design

- Once construction is completed, new trees and low lying plants will be planted in new landscaped sections between the parking spaces, to increase the green space along the road.
- Low lying plants will also be planted at the bottom of the noise wall along the rail corridor, to improve the look and feel along the street.

### Proposed Jacquie Osmond Reserve design

- A new grassed embankment will be provided alongside the rail corridor. This embankment will be planted with new trees, also helping to screen the rail corridor from view.
- The tree species will be selected to ensure shade is provided for reserve users and spectators.
